

## EDUCATION:

**Brown University, Providence, RI** | *Master of Science, Visual Computing*  
**Brown University, Providence, RI** | *Bachelor of Science, Computer Science*

(Fall 2024 - May 2025)  
(Fall 2020 - May 2024)

## WORK EXPERIENCE:

- **C++ Software Engineer, Dassault Systemes – Johnston, RI** (June 2025 - Present)
  - Shipped critical fixes and core optimizations to enterprise clients, reducing application latency and improving reliability.
  - Modularized hypervisor codebase into a lightweight portable dependency, improving cross-team development velocity.
  - Hardened CI/CD pipeline by developing E2E native app live capture automated tests with JavaScript user interaction scripting.
  - Increased automated unit, integration, and E2E test coverage by 50%+, systematically reducing workflow regressions.
  - Developed Python trace file analysis tool to identify performance gaps, accelerating root-cause analysis in production.
  - Leading design of internal AI-powered triage tooling, targeting reduced time-to-root-cause for high-frequency failure modes.
- **Fullstack Software Engineer Intern, Onset Data Loggers - LI-COR – Bourne, MA** (May 2024 - August 2024)
  - Engineered MQTT handler processing 10k+ IoT messages/day, accelerating device-cloud communication throughput.
  - Built Vue.js firmware management interface for cloud data operations, reducing manual engineering setup by 60%.
  - Prototyped a mapping dashboard with Leaflet and GIS APIs, enabling real-time user interaction with live weather data.
- **Head Teaching Assistant, Brown University CS – Providence, RI** (October 2023 - May 2024)
  - Led 14-person TA team for 100+ students, owning grading, office hours, and course materials for an upper-level CS course.
  - Redesigned 6 core projects to mirror industry UI/UX workflows, boosting engagement and producing portfolio-ready outputs.
  - Orchestrated 45 portfolio reviews with 11 industry professionals, facilitating career readiness and export feedback.
- **Frontend Software Engineer Intern, Onset Data Loggers – Bourne, MA** (May 2023 - August 2023)
  - Delivered 2 key features (notification interface and product sorting functionality) to customers for next-gen platform overhaul.
  - Improved middleware API efficiency as a part of the core engineering team, reducing overall latency for end users.
  - Executed multiple user stories per sprint in Agile workflows, consistently accelerating iteration cycles and release cadence.
- **Software Consultant, Brown School of Public Health Survey Research Center – Providence, RI** (May 2022 - August 2022)
  - Built a JS/Qualtrics API solution for district-wide high school surveys, deployed across multiple Rhode Island school districts.
  - Engineered security features with idle detection, screen lock, and access code authentication to protect sensitive student data.
- **Founder & Content Creator, Independent Art Business** (January 2020 - December 2023)
  - Grew a digital art brand to 170k+ followers and millions of views through systematic, data-driven content experimentation.
  - Managed end-to-end physical product pipeline, selling 300+ units and generating \$1.6k profit within 3 months.
  - Secured and executed official brand partnerships with Huion, XPPen, and Artisul across multi-platform marketing campaigns.

## RECENT PROJECTS:

- **Syntax Application**
  - Shipped and tested a full-stack React speed-typing app from scratch, owning E2E UX design and frontend development.
  - Drove retention and user engagement incentive by engineering personal record tracking and a competitive leaderboard.
  - Integrated GPT-3 API to deliver AI-generated code explanations, sourcing snippet data from large open-source repositories.
- **Brown UI/UX Course Website**
  - Sole engineer and designer for the official CS1300 (Introduction to UI/UX) course website, serving 100+ students per semester.
  - Owned ongoing site maintenance and iteration, keeping assignments, resources, and navigation consistently up to date.
- **Kiwi: Product Design/UX Engineering (YC Social Music Platform)**
  - Prototyped a mobile MVP with 8 core flows, turning abstract requirements into a scalable and reusable component system.
  - Ran 20+ user tests and interviews; synthesized findings into prioritized iterations that improved usability and task completion.
  - Delivered a developer-ready Figma handoff with accessibility annotations, edge case documentation, and a full style guide.
- **Origin Two (2D Game Engine)**
  - Built a Java game engine with a custom modular UI framework and dynamic content loading, scaled to power 3 shipped games.
  - Built a reusable component system supporting customizable animations, sound, and procedural text generation.

## SKILLS:

- **Computer Languages:** React.js, Vue.js, Python, Node.js, HTML/CSS, Typescript/JS, TensorFlow, Scipy, C++, Java, Shell
- **Tools:** Figma, Adobe, Git, Docker, Kubernetes, Unreal, Maya, Blender
- **Skills:** CI/CD, Scrum, Kanban, Project Management, Atlassian/Jira, Agile Methodologies
