

EDUCATION

Brown University, *Master of Science, Visual Computing & AI*

(Fall 2024 - May 2025)

Brown University, *Bachelor of Science, Computer Science*

(Fall 2020 - May 2024)

PROFESSIONAL EXPERIENCE

Fullstack Software Engineer

(Jun 2025 - Present)

Dassault Systemes – SIMULIA

- Ship critical fixes and core optimizations to enterprise clients in **C++**, reducing latency and improving reliability by **40%**.
- Write **Jasmine** test suites simulating complete E2E user workflows (e.g., login → simulate), increasing UI testing by **120%**.
- Develop **Python** tool for trace analysis to identify performance gaps, automating a previously time-intensive task.
- Integrated **Cursor** into team workflow and designing internal LLM to assist with error triage and engineering efficiency.

Fullstack Software Engineer Intern

(May 2024 - Aug 2024)

LI-COR Biosciences – Formerly Onset Data Loggers

- Engineered MQTT handler processing **10k+** IoT messages/day, accelerating device-to-cloud communication by **100%+**.
- Built full-stack **cloud platform** to consolidate and manage firmware files, significantly reducing manual configuration time.
- Prototyped a weather map dashboard with **Leaflet** and **GIS APIs**, enabling real-time user interaction with live weather data.

Head Teaching Assistant

(Oct 2023 - May 2024)

Brown University CS

- Led a **14-person** TA team, managing grading, office hours, and course materials for an upper-level CS course.
- Conducted major overhaul of course website and designed **6** core projects serving **100+ students** per semester.
- Coordinated portfolio reviews with **11** industry professionals to provide practical feedback for students.

Frontend Software Engineer Intern

(May 2023 - Aug 2023)

LI-COR Biosciences – Formerly Onset Data Loggers

- Created a notification system for users to monitor various weather sensors with real-time data visualization.
- Overhauled dashboard and login experience for core environmental-monitoring SaaS platform, supporting **1M+** devices.
- Improved middleware API efficiency, reducing overall latency for end users by **70%**.

Software Consultant

(May 2022 - Aug 2022)

Brown School of Public Health Survey Research Center

- Built a **Javascript** solution for district-wide high school surveys, deployed across multiple Rhode Island school districts.
- Engineered security features such as idle detection, screen lock, and access code authentication to protect sensitive data.

Founder & Content Creator

(Jan 2020 - Dec 2023)

Independent Art Business

- Grew a digital art brand to **170k+** followers, gaining millions of views and engagement through A/B testing and analytics.
- Sold **300+** digital prints and custom merchandise generating **\$1.6k profit** in 3 months.
- Secured **4 official brand partnerships** with digital drawing tablet companies such as Huion and XPPen.

PROJECTS

Syntax App

- Shipped a full-stack **React** speed-typing app for practicing code language syntax, leading frontend design and development.
- Sourced sample code snippets from open-source repositories, integrating **GPT-3 API** to explain the significance of the code.
- Engaged user incentive through personal record tracking and a community leaderboard, piloted with **15** users.

Kiwi: Product Design/UX Engineering (YC Social Music Platform)

- Prototyped a mobile minimum viable product with **8** core user flows, creating a modular visual component system.
- Ran **20+** user tests and interviews to improve app usability and user experience.
- Delivered a developer-ready **Figma handoff** with accessibility annotations, edge case documentation, and a full style guide.

Origin Two / Ninja Mouse (2D + 3D Game Engines)

- Built **Java** and **C++ game engines** with a reusable UI and sound toolkit, animation cycling, and physics and collision systems.
- Shipped **4 games** with additional procedural level loading and NPC AI.

SKILLS

Computer Languages: React.js, Node.js, Vue.js, Python, HTML/CSS, Typescript, Javascript, TensorFlow, C++, Java, Shell

Tools: Figma, Adobe, Git, Docker, Kubernetes, Unreal, Maya, Blender, Kanban, Atlassian/Jira, Agile Methodologies
